WORK EXPERIENCE

WeTransfer Senior Frontend Engineer

Aug 2022 / Present – Amsterdam (Netherlands)

- Refactored the editorial platform WePresent.com, which serves 2+ million monthly users and hosts 2,500+ articles, using Next.js, TypeScript, and GraphQL, significantly improving developer experience and code quality.
- Enhanced website performance by 60% through caching optimizations using CloudFront, reducing load times and increasing user satisfaction.
- Developed and integrated a Storybook-based design system with 70+ components, standardizing UI elements and improving consistency across the platform.
- Contributed to the development of internal tools like WeStatic
- Guided the adoption of the WePresent.com technical stack for the WeTransfer.com website, improving developer interoperability between teams.

WILD Technical Director

May 2021 / Aug 2022 – Turin (Italy)

- Managed a remote, multicultural team of 8 developers, designing and engineering high-performance, scalable web applications.
- Launched the internal technical documentation website, establishing coding guidelines and best practices to ensure consistent, high-quality output across the team.
- Maintained strong customer relations, collaborating with clients like Red Bull and Montefiore to deliver tailored solutions.
- Achieved 25% team growth by recruiting 3 top talents and fostering an innovative culture.

AQuest Head of Frontend

Jul 2017 / Set 2020 – Verona (Italy)

- Directed a team of 5 frontend developers, achieving high performance and code maintainability in the development of award-winning, highly interactive SPAs.
- Established coding standards, ensuring developer interoperability across 20+ projects and maintaining consistency across the team.
- Led the team to win 10+ awards in the creative industry, positioning the company as the third most recognized in the world in 2019.
- Hired and onboarded new developers, expanding the team and promoting a culture of excellence and collaboration.

PROJECTS

Dokploy Open Source Main Contributor

Aug 2024 / Present – dokploy.com

- Contributed key features like SSH Keys Management and SSH Key generation.
- Submitted multiple Pull Requests introducing new components and functionality, refining the interface built on top of Radix design system.

Postcards from Isolation Full Stack Engineer

May 2021 / Aug 2022 – isolation.linz.work

- Led the full-stack development of Postcards from Isolation, a project created during the COVID-19 pandemic, allowing users to design digital postcards reflecting isolation experiences.
- Built a custom API library that facilitates communication between postcards and the parent website through postMessage.
- Integrated over 35 postcards from 20 contributors worldwide, enhancing user engagement and global participation.
